

SAETA EQUINA

CARPET FIBER

(Staple Fibers)

ABOUT US

We are expert in production of Polypropylene fibers, and trying our best to suprising our clients with our quality and innovation. It is our main goal to do innovative products for our client which want to be the leader in their market .

CARPET FIBER

(Staple Fibers)

The staple fibers of SAETAQUINA Company are manufactured from 100% new polypropylene material, designed and manufactured for specific applications and get the best results for non-woven carpet production.

These top-quality fibers are available in a variety of colors and features to meet customer demands.

Main features

- ▶ Color stability
- ▶ Reasonable price
- ▶ Acceptable resistance
- ▶ Low static electricity
- ▶ Has Fire resistance standards
- ▶ Resistance to corrosion and abrasion
- ▶ Excellent chemical stability
- ▶ Antioxidant properties (corrosion and decomposition reduction)
- ▶ Very low weight (polypropylene fibers have the lowest specific weight among the fibers).
- ▶ Antibacterial / Antifungal: Resistant to stains and dirt
- ▶ Free of halogen and heavy metals

Application

- ▶ Carpet and floor coverings
- ▶ Filters
- ▶ Automobile bottom and roof
- ▶ Fluffy carpets
- ▶ Geotextiles

Processing

Denier's increase in these fibers will increase the resistance to abrasion of the carpet, reducing the denier will make the surface of the carpet soft and more delicate, so we suggest to use thick fibers for crowded areas and use fibers with lower denier for areas that are not crowded or in direct contact with the skin (such as bedroom floorings), so that it can be softer and more convenient for the customers.

A large circular inset with an orange border is centered on the page. Inside the circle, there is a close-up, high-contrast image of wool fibers, showing their natural crimp and texture. The background of the slide is a solid orange color. In the upper right area, there are several faint, semi-transparent orange shapes that resemble speech bubbles or callouts.

Packaging

The packaging of these fibers can be changed based on the customer's preference, but they are generally packed in 250 kg packs ready to be shipped.
